COMPACT TYPE

Services

Dredging and cleaning services with municipal vacuum units

This unit has the air flow from 2000 to 11000 m³/hr which is able to suck and vacuum of soil, stone, sludge and any types of wastes. Our company is using this equipment to provide dredging and cleaning services for open/close canals, draining ponds, wastewater canals and collecting of soil, stone, sand and etc.

Dredging and cleaning services by Combi jet

This equipment is same as vacuum unit with an additional water jet system.

Rojan Sanat Alborz provides any type of above mentioned services with this equipment including unclogging and cleaning.

Dredging and cleaning services by Combi jet equipped with water recycling system

This type of combi jet is able to separate water from wastes and sludge inside sludge reservoir and conduct it to clean water tank. Based on the client needs, our company is able to do this type of services.

Cleaning services with road sweepers

Our Road Sweepers are three types including: compact, truck mounted and tractor towed. Truck mounted units are used in highways, main streets and has a large tank.

Tractor towed sweepers are generally used in narrow roads, suburbs and factories. Compact type sweepers are being used massively in many countries and are suitable for pavements and crowded places.

All of these sweepers are equipped with a powerful suction system in back and a five meter hose which is suitable for this purpose.
